

# Manufacturing Engineer

From the phone in your hand to the shoes on your feet, everything you use in your daily life has been designed and created by an Engineer like you. Manufacturing Engineers are shaping the world we live in and Philips are at the forefront, developing pioneering technology that is transforming the medical industry. They are looking for people like you to take them into the future.

## Samenvatting

- Vacature nummer: PUB208912
- Markt: Industrie
- Branche: High Tech
- Expertisegebied: Operations & Onderhoud
- Uren per week: 40
- Opleidingsniveau: HBO
- Sluitingsdatum: zaterdag 8 juni 2019

## De functie

As a Manufacturing Engineer at Philips, you will work closely with colleagues

across multi-disciplinary teams to ensure a seamless transition between the development and manufacturing stages. Also, you will be taking the lead in producing the first production models for projects within your remit. While you're doing this, you'll be employing lean mythologies and DFX to implement changes within the process, to not only improve the quality of production, but also to increase yield and output whilst reducing cost. This way, you'll set the standard for projects by overseeing all process validation activities and discover new production methods both technical and logistic. Last but not least: working alongside the supply chain, design and purchasing teams to reach manufacturing requirements and create airtight processes, will put your creativity to the test and challenge your logistical skills.

## Over jou

- You are result-driven with a focus on quality and possess strong personal and communication skills
- Confident in your abilities and bolstered by experience working for high-tech medical device businesses, you have an in-depth knowledge of FMEA, 8D, SPC, A3 and Lean Manufacturing
- As well as an understanding of process validation disciplines (pMap, Pfmea, IQ, OQ, PQ)
- You can also analyse field performance data, installation test-results and customer related complaints in order to initiate improvements with a quality driven approach

## Wat wij bieden

Working with Brunel definitely has its perks. Aside from the standard 26 days leave, you can also benefit from subsidized CZ Health Insurance, as well as a competitive salary and an impressive bonus package. Besides that, we encourage your development as a specialist: extensive training programs will be tailor made – together we'll make your career work! Last but not least: a discounted gym-membership, social get-togethers and lots of Engineering-related meet-ups!
