

Project Engineer

Would you like to work as an Project Engineer in the offshore division at one of our clients nearby Rotterdam? Do you have 1 to 3 years of experience in the offshore industry and are you ready for the next step in your career? Then we are looking for you!

Samenvatting

- Vacature nummer: PUB213626
- Markt: Olie & Gas
- Branche: Olie en gas
- Expertisegebied: Construction, Commissioning & Operations
- Uren per week: 40
- Opleidingsniveau: Professional Master
- Sluitingsdatum: zondag 7 juli 2019

De functie

As a Project Engineer you are part of a project team and together you take care of the work preparation so that a project can start. During the implementation phase you are responsible for coordinating and managing the workload on the

project to ensure that high-quality work is delivered on time. Your responsibilities include translating project planning into detailed planning and working methods, so that the project can be realized efficiently and effectively in accordance with the contractual agreements (safety, quality, planning and budget). You consult with internal and external stakeholders to ensure that the right working methods, employees and equipment are available when needed and you identify and report deviations from the contract and take appropriate measures when needed. You will be responsible for supervising project staff, crew members and subcontractors and building and maintaining an excellent relationship with the customer.

Over jou

In your way of working you are pragmatic and solutions-oriented, while always striving for the highest possible quality and with a strong focus on safety. Based on your technical affinity and experience you are able to make a stable contribution to our offshore projects in the role of Project Engineer under various circumstances. You know the dynamics of the contractor world. That makes you a team player who knows how to interact smoothly with the client, the crew on a ship, external stakeholders and our colleagues at the head office. Furthermore you have:

- A Bachelor degree in a technical field, preferably civil engineering, maritime engineering or mechanical engineering
- A few years of working experience in an international, dynamic project environment
- Experience with civil contracting projects
- A perfect mastery of the English language, both spoken and written
- A flexible nature; you have no trouble with working abroad for longer periods

Wat wij bieden

Being seconded as a Project Engineer via Brunel Engineering means that you will be employed by Brunel. At Brunel Engineering your career is paramount. We offer you various training options to speed up your career. You will be guided within this process by a Brunel account manager. You profit from a fixed monthly salary with bonus opportunity. The salary indication for this position is in line with the market and in addition to good primary employment conditions, we also offer you excellent secondary employment conditions, including a favorable pension scheme and group insurance discount on individual insurance policies.

Brunel also offers you fun extras in the cultural and sporting field. Because not everyone finds the same issues important, you also benefit from a flexible

package of employment conditions, specifically geared to your situation. For example, you can decide for yourself whether you want to purchase extra days off. At Brunel you not only have the assurance of a contract, but also of a career.
